01-MX7-1999, sequence version 1.
01-FXP domain-containing ion transport regulator 3 precursor (Chloride conductance inducer protein Mat-8) (Mammary tumor 8 KDa protein).
Name-FXYD3; Synonyms-MAT8;
Sus scrofa (Pig).
                                                                                                                                                                                                                MEDLINE-99140476; PubMed=10206733; Maeda M., Hamano K., Hirano Y., Suzuki M., Takahashi E., Terada T., Futai M., Sato R.; Hirano Y., Suzuki M., Takahashi E., Terada T., "Structures of P-type transporting ATPases and chromosomal locations of their genes."; Cell Struct. 23:315-323(1998).
                                                                                                                                                                                                                                                                      Cell Struct. Punct. 23:315-323(1998).
-!- FUNCTION: Induces a hyperpolarization-activated chloride current when expressed in Xenopus ocytes. May be a modulator capable of activating endogenous ocyte channels.
-!- SUBCELLULAR LOCATION: Membrane; single-pass type I membrane
                                                                                                                                                                                                                                                                                                                                                                                  EMBL, AB015759, BAA35078.1, -; mRNA.

Proc. Natl. Acad. SGi. U.S.A.

-!- FUNCTION: Induces a hyperpolarization-activated chloride current

when expressed in Xenopus occytes. May be a modulator capable of
FXYD domain-containing ion transport regulator 3 precursor (Chloride conductance inducer protein Mat-8) (Mammary tumor 8 kDa protein) (Phospholemman-like).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         activating endogenous oocyte channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TISSUE=Lung carcinoma;

Genomics 68:41-56(2000).
-!- FUNCTION: Induces a hyperpolarization-activated chloride current when expressed in Xenopus occytes. May be a modulator capable of activating endogenous occyte channels.
-!- SUBCELLULAR LOCATION: Membrane; single-pass type I membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                         RECONSTRUCTION FROM ESTS, AND CONCEPTUAL TRANSLATION.

-:- TISSUE SPECIFICITY: Selectively present in the distal parts of the nephron (medullary and papillary collecting ducts and end portions of cortical collecting tubule) and in the epithelial cells of the distal colon. No expression is found in renal proximal tubule, loop of henle and distal tubule, proximal colon, small intestine, lung, choroid plexus, salivary glands, or brain.
-:- INDUCTION: By corticosteroids.
-:- SIMILARITY: Belongs to the FXYD family.

Biol. Chem. 270:2176-2182(1995).

-!- FUNCTION: Induces a hyperpolarization-activated chloride current when expressed in Xenopus oocytes. May be a modulator capable of activating endogenous oocyte channels.
-!- SUBCELLULAR LOCATION: Membrane; single-pass type I membrane protein (Potential).
-!- TISSUE SPECIFICITY: Expressed in a subset of murine breast tumors.
-!- MISCELLANBOUS: Marker of a cell type preferentially transformed by

Na+/K+-exchanging ATPase (EC 3.6.3.9) gamma chain - sheep (fragment)
N;Alternate names: sodium pump gamma chain; sodium/potassium-dependent ATPase gamma chair C;Species: Ovis orientalis aries, Ovis ammon aries (domestic sheep)
C;Daces: 22-Nov-1993 #sequence_revision 05-Dec-1998 #text_change 09-Jul-2004
C;Accession: A46435; S31524; A27383
